ABOUT US

Scooter99.com is the leading and competitive trade company in the world's marketplaces today, we specialized in reconditioning scooters and build a state of the art sidecars for your satisfaction. Our aim is to build up the trade name and follow the strategy of developing international market for our product. We have taken lots of effective measures and operate strictly according product quality management; we put quality, service, price, speed, and creativity on our check list.

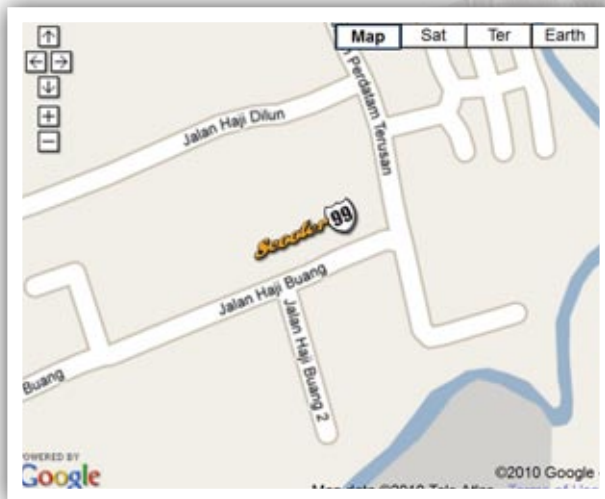

These facts fully reflect our trade name's strategy and help our company in exploiting wider market. At the same time, our company gains trust widely from our customers . We understand and listen to your requirements; we built the Scooter and Sidecar to meet your needs.

Our reconditioned Scooter has been fully tested by our engineer before we ship it out to our customer. The Sidecar design itself was a result of a number of years on the road test and research to make a better, saver, and lighter sidecar. Our product quality has been put to the test all over the world, and has received warm welcome in more than 10 countries especially in USA and Canada.

Another additional point would be that all the work is done on one location which is our workshop in Jakarta, Indonesia. We fully monitor our engineer from the starting of the work like stripping down of the Scooter for recondition-ready and build up the sidecar until the shipment of the unit to the agreed location by the customer.

OUR LOCATION

PRODUCT

Vespa PX Pink With Sidecar 1979

price
\$3,250.00

This scooter is Vespa Piaggio PX150 1979, fully restoration. Better power, lightning and horn sounding perform consistently, easy to start engine.

The body is rust free, straight body, has been stripped down sanded to bare metal and repainted in Pink & Cream color. It can run up to 56mph without sidecar, and below 40 mph

(recommended) with passenger on sidecar max 170 lbs. Manual hand twist 4 speed transmission. 150 cc two stroke engine. Gasoline mixed with 2% oil.

The sidecar is made from $\frac{3}{4}$ inch tubular seamless pipe framework and with fiberglass that won't rust and light. It is suitable for an adult weighing not more than 170lbs.

New Engine Specification:

Engine

Type

Single cylinder, two-stroke

Ape Pick Up 5

price
\$6,000.00

A single seated front, scooter with 3 wheels, inside using Bajaj engine 150cc, the purpose of this vehicle is to loading or unloading goods, or transporting goods with the speed up to approximately 45mph with four speed gears (including 4 forward gears and a reverse gear).

The normal forward gear would still be on the left hand side steering just like normal vespa scooter (1st backward, 2nd 3rd 4th forward). The reverse gear shift (see picture) would be on the right hand side, which located just underneath the fuel tank (easy operation shift).

The seats is made from synthetic leather cover seat with spring suspension.

The rear compartment made from wood with dimension approximately inside width 106 cm x length 110 cm x height

28.5 cm. The scooter dimension around: length 2500 cm x height 852 cm x width 1260 cm.

Headlight installed on the front bumper from vespa fender light 50's for you to get better vision at night time.

The front suspension is using vespa scooter suspension, while the rear suspension using bajaj 3 wheels suspension. And the drive train has a shaft and two chains inside.

The chassis is made from 2mm steel plate (rear) and 1.2mm for the front.

All wheels are standard vespa 50's 8 inches scooter wheels.

All wheels are installed with brake, to feel safe when riding this three wheels scooter.

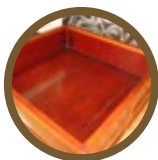

The front handbrake would still be applied to front wheel, which is operating from right hand side of the steering.

The rear brake has hydraulic on the deck floor, to handle heavy load goods on two wheels on the back of the scooter.

There is left hand starter for the engine (pulled). The fuel tank on the right hand side can hold up to 6 liters and using mix fuel 98% of gasoline leaded or unleaded and 2% of oil.

The rear brake lights are installed on the back of the loading compartment, which are connected to the foot brake pedal when it's operated. The turn signals are not available.

The exhaust is installed underneath the loading compartment.

Calessino 5

price
\$5,500.00

A single seated front and two rear, scooter with 3 wheels (looks like Vespa Ape Piaggio), inside using Bajaj engine 150cc, the purpose of this vehicle is to loading or unloading goods, or transporting goods, or cruising with the speed up to approximately 45mph with four speed gears (including 4 forward gears and a reverse gear).

The normal forward gear would still be on the left hand side steering just like normal vespa scooter (1st backward, 2nd 3rd 4th forward). The reverse gear shift (see picture) would be on the right hand side, which located just underneath the fuel tank (easy operation shift).

The seats is made from synthetic leather cover seat with spring suspension.

The rear compartment made from wood with dimension approximately inside width 106 cm x length 110 cm x height

28.5 cm. The scooter dimension: length 2500 cm x height 852 cm x width 1260 cm.

Headlight installed on the front bumper from vespa fender light 50's for you to get better vision at night time.

The front suspension is using vespa scooter suspension, while the rear suspension using bajaj 3 wheels suspension. And the drive train has a shaft and two chains inside.

The chassis is made from 2mm steel plate (rear) and 1.2mm for the front.

All wheels are standard vespa 50's 8 inches scooter wheels.

All wheels are installed with brake, to feel safe when riding this three wheels scooter.

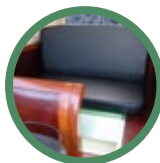

The front handbrake would still be applied to front wheel, which is operating from right hand side of the steering.

The rear brake has hydraulic on the deck floor, to handle heavy load goods on two wheels on the back of the scooter.

There is left hand starter for the engine (pulled). The fuel tank on the right hand side can hold up to 6 liters and using mix fuel 98% of gasoline leaded or unleaded and 2% of oil.

The rear brake lights are installed on the back of the loading compartment, which are connected to the foot brake pedal when it's operated. The turn signals are not available.

The exhaust is installed underneath the loading compartment.

Sidecar 1

price
\$1,000.00

This sidecar is made from $\frac{3}{4}$ inch tubular seamless pipe framework and with fiberglass that won't rust and light. It is suitable for an adult weighing not more than 170 lbs. The features on the sidecar are as following (scooter is not included):

- Nicely Carpeted Interior

- Comfy Custom handmade Seat, can be tilted forward for extra storage(helmet)
- New tire, tube, 10 inch steel wheel and white wall inserted
- New Kayaba Shock absorber and Spring
- Rain Cover
- Sidecar fender lamp
